DETAILED ACTION

Allowable Subject Matter

1. Claims 1-42 are allowed.
2. The following is an examiner's statement of reasons for allowance.

United States Patent 3,811,317 to Leonard *et al.* teaches a method for inspecting a moving web for pinholes using the steps a) applying a liquid (ammonia) to a first side of the moving web and b) applying a vacuum to a reacting paper (diaz paper) that is in contact with the moving web. The vacuum draws the liquid through the web and into contact with the reaction paper. The reaction paper changes color to provide a visual indication of a hole in the moving web. United States Patent 6,818,083 to McAmish *et al.* teaches a known test method (HCTM-02) for inspecting a second surface of a sample material for pinholes by allowing a liquid to pass through a first surface of the sample material over time (not assisted by a vacuum). There is no suggestion in the art to provide a method for inspecting for pinholes by eliminate the reacting paper/liquid combination of Leonard *et al.* and replacing it with a liquid/vacuum that provides a leak indication on the second surface of the moving web.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
